# The **M.U.S.C.L.E.** Figure Guide

Poster Figures Edition

## The M.U.S.C.L.E. Figure Guide - Poster Figures

### **“How much is it worth?”**

Whether it is classic cars, tea pots, baseball cards, or little rubber guys, that question is the quintessential cornerstone to collectors. For some items it is easy to assign a value because there is a vast knowledge base and years of accessible collective experience. For M.U.S.C.L.E. collectors it is not easy. There are varied perspectives, differing experiences, and a combination of misinformation and lack of information.

Instead of trying to assign an ever changing dollar figure to any of the figures, the goal of the UofMUSCLE Figure Guide is to provide some general framework and understanding about M.U.S.C.L.E. figures.

M.U.S.C.L.E. figures from the poster, figures 1 – 233, generally fall into 3 classifications: Class C, Class B, and Class A. Authentic M.U.S.C.L.E. figures that are not on the poster deserve their own attention and are discussed in the Non-Poster M.U.S.C.L.E. Figure Guide.

The classifications were based on several things. The most notable resource was the MUSCLE Database. This website’s original goal was for it to be used as a tool for collectors to:

...organize, document, and share their collections with other collectors around the world. Furthermore, by adding information about their collections to MuscleDB.com, collectors can take part in the ongoing attempt to document every M.U.S.C.L.E. figure ever made by Mattel, answering the "which models were released in which colours" question once and for all.

Soupie, <http://www.muscledb.com/>

Unfortunately this altruistic purpose was eventually corrupted and the site was used to purport the rarity of certain figures. Unscrupulous collectors added and subtracted figures in an attempt to both decrease and increase the number of reported figures. This guide used numbers from both pre-contamination and post-contamination. This helped to control for these malicious errors.

The work of “Soupie” and Universal Ruler Supreme was also used. Ultimately their information became the M.U.S.C.L.E. Colors Image Archive (<http://home.comcast.net/~nicole.tarconish/MUSCLECIA.html>), but in addition to the website both their original unpublished work and comments on the LRG message board were also used.

The last major part that influenced the classifications was this author’s personal experience collecting a complete set of 1519 color figures. This author has been actively collecting M.U.S.C.L.E. since 2002, and researching M.U.S.C.L.E since early 2003.

Additionally other M.U.S.C.L.E. collectors and experts (Jon Karis, Nathan Nedwell, etc.) were conferred with to share their experiences and add their input to the guide.

### **“So what do the classifications mean?”**

If collectors care about price, then the next thing they care about is rarity. The truth is none of the M.U.S.C.L.E. poster figures are rare. Based on Mattel’s standard operating procedures there are likely at least 9 million M.U.S.C.L.E. figures. Wal-Mart alone would have had over 2 million figures in their stores in 1987. Some estimates actually put the potential number of M.U.S.C.L.E. figures at almost 500 million figures.

With that said, the figures do fall into three general classifications. The first is Class C. These are the figures that always appear. They appear at garage sales, online auctions, resale shops, and any other place that M.U.S.C.L.E. figures could be found. For example all of the Flesh poster figures are categorized as Class C figures. These figures were likely the result of all the assigned Bandai factories producing a properly assigned quota of figures (a full production run).

The second classification is Class B. These should not be thought of as “more rare” than Class C figures, but rather as a transitional group of M.U.S.C.L.E. figures. In many cases, these figures could easily slide into a Class C or Class A ranking because an arbitrary number needed to be set to differentiate the groups. The discovery of one large lot of figures could easily push any of these figures into a Class C ranking.

Perhaps one day collectors will have a new classification system. This new system will likely have only have two groupings of figures – the full production group (Class C) and the final production group (Class A). With enough data the Class B classification should become obsolete.

Class B currently exists for a variety of reasons. Probably the most important reason is lack of data. The second reason would be the phenomenon with the reporting of Salmon and Orange figures. These figures may be less recognized and recorded simply because of user error. Fading and wear can make the proper identification of Flesh, Salmon, and Orange challenging.

The most unique ranking is that of Class A. Based on the author's discussions with Mattel employees, and personal experience collecting figures categorized as Class A, he believes these are the figures that most likely appeared at the end of production. Unlike the "full production" of Class C figures, these figures were likely the result of less factories producing figures (the final production group) or the "next" production run being canceled for all of the factories very early in production. When these figures left their production sites they likely ended up in Canada – specifically Western Canada, further supporting the idea that only certain factories produced the figures.

Again, Class A figures are not rare. Rather they are more challenging for most collectors to uncover because of their propensity for being almost singularly located in Western Canada. Additionally, M.U.S.C.L.E. figures are not widely known to be popular or collectible so current owners are not driven by any knowledge of a waiting marketplace.

There will be opponents of the idea that Class A figures are not rare. They will most likely cite how the figures can be difficult to find, that they do not turn up on auction websites often, and that they are often sold for prices of \$50 or more. These examples are all valid. The author of this guide sold a Purple 154 for \$220 in a message board auction, however the auction was driven by multiple factors: (1) a desirable figure; (2) impatience; and (3) aggressive collectors looking for an elusive piece.

However, this author acquired two Purple 154 figures for less than \$5 combined only months earlier. Additionally, there are figures like Red 38. This figure is also a Class A figure, however this figure garnered little interest. At the time of publication this figure had received zero offers to be either traded for or bought.

Class A figures are not automatically valuable. The value of any figure is ultimately driven by some combination of: Impatience, Funding, Desire, Competitiveness, and Ignorance. Each potential buyer will have different levels of each factor.

This guide is designed to consolidate all of the available M.U.S.C.L.E. information into one easy-to-use guide for collectors. Remember, these rankings do not imply any financial value. There's a fine quote from a noted art collector named Charles Saatchi:  
Nobody can give you advice after you've been collecting for a while. If you don't enjoy making your own decisions, you're never going to be much of a collector anyway.

Good luck! Enjoy the hunt – it's far more satisfying than the catch!
